

Thermo-Treated Wood Accent Wall Planks

Made in the USA, Therma Paneling is an innovative, real wood product that enhances any space with its stylish finishes and superior quality. Using thermal modification of wood (a proprietary Green Technology) makes this paneling free of bacteria and insects with increased dimensional stability. Installation is made easy with DIY kit included in each box.

Features of the Wall Planks:

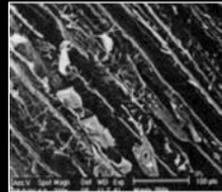

Thermo-Treated Wood is exposed to extremely high temperatures (400 degree Fahrenheit) with no chemicals added. It is a 100% "Green" product. The thermo-treatment process accelerates the aging of wood to make it similar to 350-year old lumber (see the microscope view of wood before and after Thermo-Treatment).

Normal kiln dried lumber

Thermo-Treated lumber

350-year old lumber

The process eliminates all moisture, resins, sugars, organisms, and bacteria in the wood. In opposite to reclaimed lumber, which was staying outdoors for decades, our product is free of any insects and bacteria. Bringing reclaimed outdoor lumber to your home is not safe: you'll bring all chemicals and insects with this. The thermo-modified wood is pure and it is a 100% Green product!

Our planks are perfectly milled and due to thermo-treatment, they will not be shrinking, cupping and moving on the wall.

The planks are great for both residential and commercial applications such as accent walls, wainscoting, wall tiles, ceilings, wall art, headboards, underbars, upgrades for furniture and doors, and many others. Thermo-treatment makes wood essentially durable: you may use our planks in high humidity environment, such as bathrooms, kitchens, basements, pool areas, backsplash areas.

Every piece is manually selected to combine our sets for the best look and performance. The planks are wire brushing to make a 3D textured surface. The product is made in the USA.

- ★ *No chemicals, bacteria or insects in the wood - 100% Green, pure and safe product*
